

SakuraSpeak

Development Report (Update)

Japanese Learning Platform — Launch-ready prototype

This round: 4 mini-games · real auth & member management · Stripe-ready · premium gating

Issued: **June 30, 2026**

Produced by: **STELLAR / MOFURI**

Live at: jiantailanglin266-rgb.github.io/sakura-speak-lp

Greetings

Thank you for your continued partnership. Since the last report, we've built out the features agreed for launch. The prototype now covers the full journey — from the public landing page through sign-up, subscription, the member area, and an admin console — and it's live for you to try in the browser. This update summarizes what's new, shares every URL, and lists what's needed on your side to take it fully live.

Mini-games

What's new this round

- ✓ **Mini-games completed (4 total)** — added **Sentence Scramble** (tap words into the right order) alongside Word Blitz, Memory Match & Listen It.
- ✓ **Avatar — preset selection** — replaced the dress-up customizer with a simple picker of ready-made Meemi looks (selection only). These are placeholders, ready to swap for your supplied artwork.
- ✓ **Real authentication & accounts** — sign-up / login / guest / logout with sessions; the member area is gated (signed-out visitors are redirected to sign in). Email-confirmation flow supported.
- ✓ **Member database** — member data persists; ready for Supabase (schema & setup guide included).
- ✓ **Member management (admin)** — the admin console lists members and can suspend / ban / restore and grant or revoke admin — on live data.
- ✓ **Guest → account upgrade** — guests are nudged to create an account; upgrading keeps the same account & progress.
- ✓ **Stripe-ready checkout** — the subscribe screen redirects to Stripe (Payment Links) once your links are set; otherwise a demo checkout. No server required.
- ✓ **Free / Premium gating** — premium features (e.g. mini-games) are locked for free members and unlock after subscribing; the plan status shows in the sidebar.

Everything runs today on the static site in a built-in demo mode (no real charges/data). Setting the Supabase and Stripe details (below) switches the same screens to real auth, database and payments — no code changes.

Live URLs try it on any device

► Home (public landing page)

<https://jiantailanglin266-rgb.github.io/sakura-speak-lp/>

Screen	URL
Sign up / Log in	/auth/
Subscribe	/subscribe/
Member dashboard	/dashboard/
Lessons	/dashboard/lessons/
Mini-games (premium)	/dashboard/games/
Vocabulary sheets	/dashboard/vocab/
Avatar	/dashboard/avatar/
Profile / Community	/dashboard/profile/ · /dashboard/community/
Admin console	/admin/

All paths are under the Home URL above.

Demo logins (demo mode)

Admin: **admin@sakura.dev** / **password**

Or register on </auth/>, or tap "Continue as guest".

Suggested walkthrough

1. LP → sign up · 2. Open Mini-games → see the premium gate · 3. Subscribe (demo) → games unlock · 4. Log in as admin → Members.

Scope status

Delivered (our side)

- ✓ Design & front-end of all screens
- ✓ Vocabulary sheets (10 cat / 101 / 2,122)
- ✓ Auth, member DB & member management
- ✓ Subscription screen + Stripe redirect
- ✓ Premium gating & plan status

To go live (your side)

- ✓ **Design image assets** (incl. official Meemi art)
- ✓ **Domain & server** + production deployment
- ✓ **Stripe** account + Payment Links + webhook
- ✓ **Backend accounts** — Supabase + email (SMTP)

A step-by-step setup guide is included in the project (**docs/backend-setup.md**): run the schema, set the env values, and the same site switches to real auth, database & payments.

Please try the screens and share your thoughts on usability, design direction, and what to prioritize next. Once the items on your side are ready, we can move to the production launch. Thank you very much.
