

SakuraSpeak

Setup & Deployment Guide

For the delivered package — a step-by-step manual

No coding needed for the basic setup 🌸

For: **Sakura Speak — Client**

From: **Stellar Inc. (株式会社Stellar)**

Version: **June 30, 2026**

1. What you received

You received a single ZIP file: `Sakura Speak 納品一式 2026-06-30.zip`. Unzip it (right-click → “Extract All” on Windows, or double-click on Mac). Inside you'll find:

Folder / file	What it is
<code>build/</code>	The finished website — ready-to-publish files. This is what you put online.
<code>source/</code>	The full source code (for developers / future changes).
<code>docs/</code>	PDFs: proposal, quotation, development report.
<code>HANDOVER.md</code>	A short technical summary.

The big picture: The site works in two stages. **Stage 1 (this guide, sections 2–3)** puts the site online so people can see and use it in a “demo mode”. **Stage 2 (section 4)** connects real accounts and payments. Stage 1 needs no coding; Stage 2 is best done with a developer (we can help).

2. Put the site online — the easy way No coding

The fastest way to get a public link, using the free service **Netlify Drop**.

- 1 Unzip the delivered ZIP (see section 1). Find the `build` folder.
- 2 Open a web browser and go to `https://app.netlify.com/drop`
- 3 Drag the whole `build` folder onto the page (the area that says “Drag and drop your site folder here”).
- 4 Wait a few seconds. Netlify shows a live link like `https://random-name.netlify.app` — your site is online!

- 5 (Optional) Create a free Netlify account to keep the site and rename the link.
- 6 (Optional) Connect your own domain: in Netlify, “Domain settings” → “Add a domain”, then follow the on-screen steps.

Tip: Other free static hosts work the same way — Cloudflare Pages, Vercel, GitHub Pages, etc. Whatever you choose, you are simply publishing the contents of the `build` folder.

Please don't just double-click `build/index.html` to open it from your computer — some styling/links won't load that way. Always publish it to a host (above), or use the local-preview method in section 5.

3. Put it on your own server / hosting No coding

If you already have web hosting (a domain with cPanel, an FTP account, etc.):

- 1 Log in to your hosting control panel (or open your FTP app, e.g. FileZilla).
- 2 Open your website's public folder — usually named `public_html`, `www`, or `htdocs`.
- 3 Upload **everything inside** the `build` folder into that public folder (upload the contents, not the `build` folder itself).
- 4 Make sure `index.html` sits directly in the public folder.
- 5 Visit your domain in a browser — the site should appear.

If the site will live in a sub-folder (e.g. `yourdomain.com/sakura/`) rather than the main domain, it must be rebuilt with that path set. This is a small developer task — see section 4 / contact us.

4. Make it fully live: accounts & payments Developer

In demo mode, sign-ups and payments are simulated. To use **real** member accounts, a database and real Stripe payments, connect the two services below. Full technical steps are in [source/docs/backend-setup.md](#).

Overview:

A. Member accounts & database — Supabase (free to start)

- Create a project at [supabase.com](#) (this account/billing stays yours).
- Open the project's "SQL Editor" and run the file [source/supabase/schema.sql](#) (copy-paste & Run).
- Turn on Email sign-in under "Authentication". For reliable sign-up emails, add an email sender (e.g. Resend/SendGrid) — optional but recommended.
- From "Project Settings → API", copy the **Project URL** and the **anon public key**.

B. Payments — Stripe (no server needed)

- In your Stripe dashboard, create a **Payment Link** for each plan (Monthly / 3-Month / Yearly / Lifetime).
- For each link, set the after-payment redirect to [https://your-site/subscribe/?checkout=success](#).
- Copy each Payment Link URL.

C. Enter the values and rebuild

- In [source/](#), copy [.env.local.example](#) to [.env.local](#) and paste the Supabase URL/key and the Stripe links into it.
- Rebuild: in [source/](#) run `npm install` then `npm run build`, and re-publish the new [out/](#) folder (same as section 2/3).
- The same screens now use real accounts, database and payments — no other changes.

Optional: live Anime Learning videos (YouTube)

- At [console.cloud.google.com](#): create a project → enable **YouTube Data API v3** → create an **API key**.
- Restrict the key: HTTP referrers = your domain, API = YouTube Data API only (it's used in the browser).
- Set `NEXT_PUBLIC_YOUTUBE_API_KEY` in [.env.local](#) and rebuild.
- **Free** — 10,000 units/day (~90 searches), no credit card. Without a key, sample videos + "Open on YouTube" are shown.

This stage needs a developer (it involves a few commands). If you'd like, we can do the full connection and go-live for you — just ask.

5. Preview on your computer & demo logins

Preview locally (optional, needs Node.js)

- 1 Install Node.js (LTS) from nodejs.org.
- 2 Open Terminal / Command Prompt in the `source` folder.
- 3 Run `npm install`, then `npm run dev`.
- 4 Open `http://localhost:3000` in your browser.

Demo logins (demo mode)

- Admin (to see the admin console): **admin@sakura.dev** / **password**
- Or click “Sign up” to make an account, or “Continue as guest”.

6. Troubleshooting

Problem	Fix
Opened <code>index.html</code> and it looks broken / no styles	Don't open it directly from disk. Publish the <code>build</code> folder to a host (section 2) or use local preview (section 5).
Site is online but images/fonts missing	Make sure you uploaded the contents of <code>build/</code> so that <code>index.html</code> and the <code>_next</code> folder are together in the same place.
Sign-up / payment doesn't really save	That's expected in demo mode. Complete section 4 to connect Supabase & Stripe.
It's in a sub-folder and links 404	Needs a rebuild with the sub-path set — small developer task (section 4 / contact us).

Future renewals & new features

If you'd like to **renew the design or add new features** later, we're happy to help and will tailor the work to your wishes — whether it's lesson content, new screens, integrations, or a full redesign. Just reach out and we'll scope it together.
